

| HOW TO | IMPLEMENT VDI

IDENTIFICATION

What current infrastructure could be improved?
What desktop user environment would best suit your team?

DESKTOP USER ENVIRONMENT

Choosing the right virtualisation approach is important.

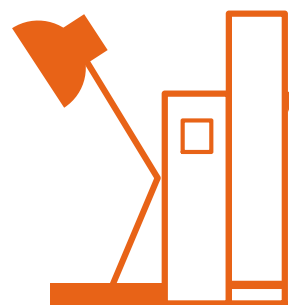

RESOURCES

Does your organisation have the skillset to implement VDI or will you have to outsource this responsibility?
Does the organisation have the network bandwidth to support VDI?
Your organisation may need to update its storage to host all virtual desktops.

PEOPLE FOCUSED

What requirements do the end users have which the organisation needs to be aware of? This will affect which applications are used.

START DEPLOYMENT

Ensure deployment is done securely and in line with the organisation's cybersecurity policy. A deployment plan could be an effective way to phase its implementation. Ensure data is backed up regularly and securely.

UK ORGANISATIONS

According to our 2020 research, 42% of respondents were using Virtual Desktop Infrastructure/Desktop as a Service prior to the nationwide lockdown. 8% of respondents are considering adopting this service in the future
